1. **Nombre** Los toros están listados en orden alfabético de acuerdo a los nombres con que están inscriptos en el registro genealógico de la raza. Además figura el nombre del padre (P) y de la madre (M).
2. **HBA** Para los toros de pedigree figura el HBA: número de registro oficial fiscalizado por la Sociedad Rural Argentina. En caso de un toro Doble A, se antepone la sigla AA al RP correspondiente.
3. **Año** Es el año de nacimiento del padre listado.
4. **Crs** Es el número de crías (de pedigree y/o puro controlado) cuyos registros de performance han sido analizados para evaluar el toro listado. Este número es orientativo, pues no todas las características evaluadas en dicho toro padre se basan en ese número de crías. Por ejemplo, no todos los establecimientos pesan la misma cantidad de animales al nacer que al destete. Y esto también puede ser válido para las demás características evaluadas. Por lo tanto, hay menos crías en las características que se van agregando al Resumen de Padres, como por ejemplo en las de calidad de carne (datos ecográficos).
5. **Rds** Nos indica el número de rodeos (establecimientos) en los que un toro padre dejó progenies.
6. **DEP** Los DEP (diferencia esperada entre progenies) predicen cómo se comportará la futura progenie de los toros listados en cada una de las características de producción evaluadas. Los DEP pueden ser positivos (+), negativos (-) o cero (0), y están expresados en la unidad de medida correspondiente a cada característica: kilos si es peso al nacer, o centímetros si es circunferencia escrotal, por ejemplo.
7. **Prec** La Prec (Precisión) indica el grado de confiabilidad que se puede tener en el DEP que acompaña. Una Prec cercana a 1 (uno) indica alta confiabilidad, mientras que cercana a 0 (cero), baja confiabilidad. Si un

toro padre no deja progenies en 3 o más establecimientos (Rod.), su Prec es restringida a 0.85, como máximo; esto es válido para cualquier característica evaluada.

8. **Gest.** El largo de gestación (Gest.) representa la cantidad de días entre la concepción y el nacimiento. Este DEP predice la diferencia en días (en más o en menos) en el largo de gestación que tendrá la progenie de un toro padre en particular, con respecto otro. Trabajos de investigación indican que hembras con intervalos de gestación más cortos tienen más tiempo para reponerse y mejoran su eficiencia reproductiva. A su vez, menores largos de gestación están asociados a más bajos pesos al nacer y tienden a tener menores dificultades al parto.
9. **Nacer** Este DEP, expresado en kilos, predice la capacidad que tiene el toro considerado para transmitir peso al nacer a su progenie. En el ejemplo se espera que las crías del Toro A pesen, en promedio, 1.2 kilos menos que las del Toro B (+1.4 menos +0.2 = 1.2). El peso al nacer es un indicador de la facilidad de parto; DEP más altos indican, generalmente, mayores problemas de parto (distocia).
10. **Dest.** Este DEP, expresado en kilos, predice la capacidad que tiene el toro considerado para transmitir crecimiento al destete a su progenie. Todos los pesos al destete analizados fueron ajustados a los 205 días y por edad de la madre. En el ejemplo se espera que la progenie del Toro A pese, en promedio, 3.4 kilos menos que la del Toro B (+8.6 menos +5.2 = 3.4).
11. **Leche** Este DEP indica la aptitud lechera que transmite un toro a sus hijas, medida a través del peso al destete de sus nietos y nietas. En el ejemplo, las hijas del Toro A brindan una cantidad extra de leche que les permite destetar crías con 7.8 kilos más, en promedio, que las nacidas del Toro B (+6.7 menos -1.1 = 7.8). Es importante destacar, asimismo, que cada hija también transmite a sus descendientes, conjuntamente con esos genes para leche, los genes para crecimiento provenientes de su padre.
12. **Final** Este DEP, expresado en kilos, predice la capacidad que tiene el toro considerado para transmitir crecimiento a sus crías, medido como peso a los 18 meses. En el ejemplo, la progenie del Toro A pesará, en promedio, al año y medio de edad, 5.6 kilos más que la del Toro B (+14.9 menos +9.3 = 5.6).
13. **C.E.** Este DEP, expresado en centímetros y ajustado a los 18 meses, predice la capacidad del toro para transmitir esta característica a su progenie. Nuestro ejemplo indica que los hijos del Toro A tendrán, en promedio, a los 18 meses de edad, 1.2 cm más de circunferencia escrotal que los del Toro B (+1.2 menos +0.0 = 1.2). Recuerde que la circunferencia escrotal es uno de los mejores estimadores de la fertilidad, ya que está asociada con la cantidad de semen producido por el toro y con la edad a la que sus

crías ingresan a la pubertad (precocidad sexual); DEP mayores significa que la progenie alcanzará más temprano su madurez sexual.

14. **Altura** Este DEP, expresado en centímetros y ajustado a los 18 meses, es muy importante cuando tenga que elegir, por ejemplo, entre dos toros con igual DEP de peso final, a los fines de evitar incrementar el tamaño corporal más allá de lo deseado.
15. **E.G.D.** Este DEP, expresado en milímetros y ajustado a los 18 meses, predice la capacidad del toro para transmitir mayor o menor espesor de grasa dorsal (EGD) a su progenie, dependiendo si su valor es positivo o negativo, respectivamente *.
16. **E.G.C.** Este DEP, expresado en milímetros y ajustado a los 18 meses, predice la capacidad del toro para transmitir mayor o menor espesor de grasa de cadera (EGC) a su progenie, dependiendo si su valor es positivo o negativo, respectivamente *.
17. **A.O.B.** Este DEP, expresado en centímetros cuadrados y ajustado a los 18 meses, predice la capacidad del toro para transmitir mayor o menor área de ojo de bife (AOB) a su progenie, dependiendo si su valor es positivo o negativo, respectivamente *.
18. **%G.I.** Este DEP, expresado en porcentaje y ajustado a los 18 meses, predice la capacidad del toro para transmitir mayor o menor porcentaje de grasa intramuscular (%GI) a su progenie, dependiendo si su valor es positivo o negativo, respectivamente *.
19. **%C.M.** El porcentaje de cortes minoristas (%CM) es un DEP compuesto que combina, principalmente, información del peso al momento de la medición ecográfica (PM), el área de ojo de bife (AOB) y el espesor de grasa dorsal (EGD). Predice la diferencia en kilos de cortes minoristas que daría, en promedio, la progenie de un toro padre en particular, con respecto a otro *.
20. **Terneza** El trabajo publicado en el “Journal of Animal Science” de mayo 2007, demostró que los individuos con las variantes alélicas (genéticas) más favorables (+) para los marcadores de Calpaína y Calpastatina tienen una correlación altamente significativa ($P < 0,001$) con la terneza de la carne, medida mediante WBSF (1 kilo menos de fuerza de corte). Por simplicidad, la variante alélica de mayor terneza se identifica como (+) y la de menor terneza como (-). Por lo tanto, para cada marcador, los animales pueden ser ++ (homocigota para mayor terneza), -- (homocigota para menor terneza) ó +- (heterocigota). El genotipo más favorable a la terneza (6 positivos) para CAST₂₉₅₉, CAPN1₃₁₆ y CAPN1₄₇₅₁ es ++ ++ ++, respectivamente, mientras que el menos favorable es -- -- --. Dentro de estas dos variantes extremas tenemos 27 combinaciones posibles que

indican mayor o menor terneza (o fuerza de corte), de acuerdo a cómo se presenten estos tres marcadores moleculares en un reproductor (o genotipo) en particular. El marcador molecular CAST₂₉₅₉ es usado por la empresa australiana GeneSTAR® mientras que la empresa estadounidense Igenity® utiliza la CAST_{UoG}. En consecuencia, todo lo expresado anteriormente es válido. Sólo tiene que reemplazar CAST₂₉₅₉ por CAST_{UoG}. Es decir, la diferencia de menor fuerza de corte es la misma (1 kilo), independientemente del marcador molecular que use para Calpastatina, siempre y cuando el genotipo combinado sea el más favorable (++ ++ ++) con respecto al menos favorable (-- -- --). **

* Mayor información la encontrará en el capítulo referido a Características Carniceras por Ultrasonido, del **Resumen de Padres AnGus del presente año**. Su uso es el mismo al de los DEP descriptos en este diagnóstico.

** Mayor información la encontrará en el capítulo referido a Terneza: SAM, del **Resumen de Padres AnGus del presente año**.
